 Reuse

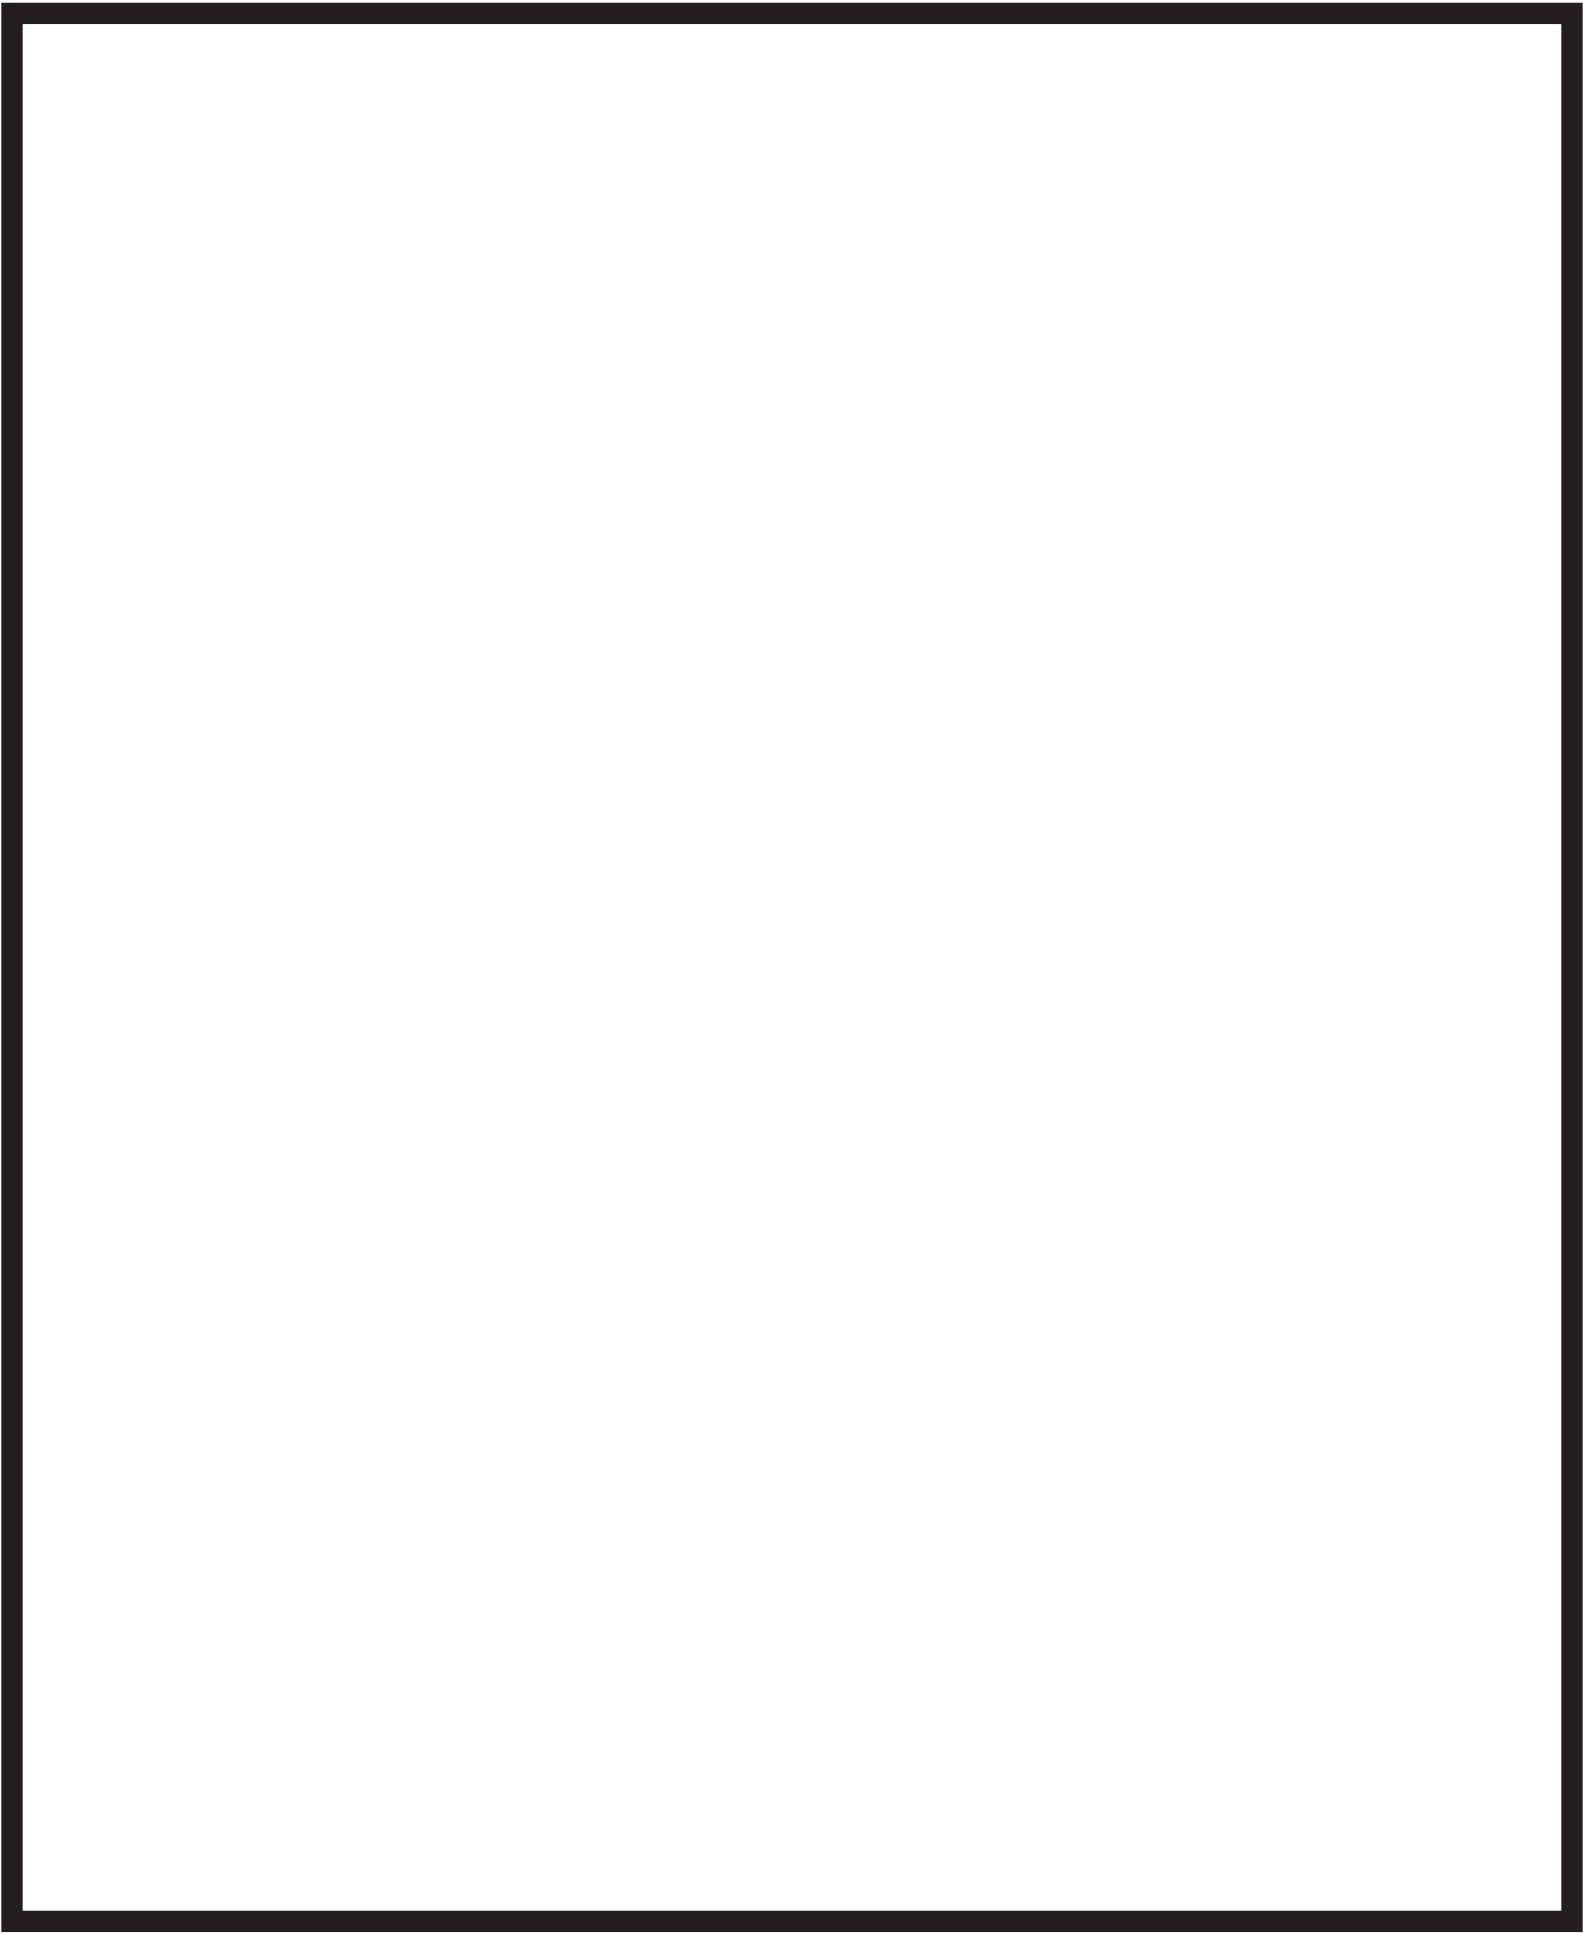

Make a list of things that
can be recycled.

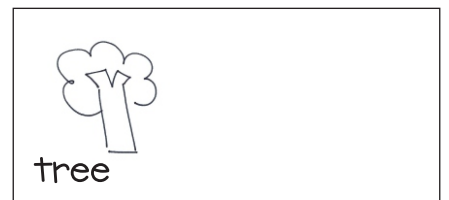

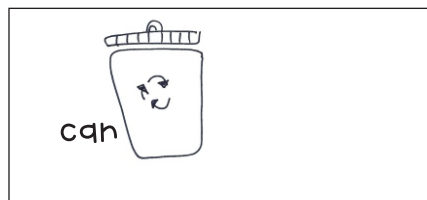

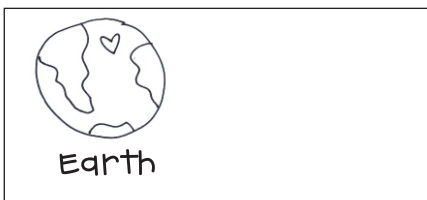

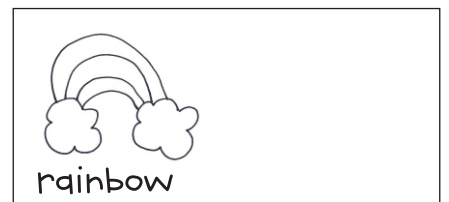

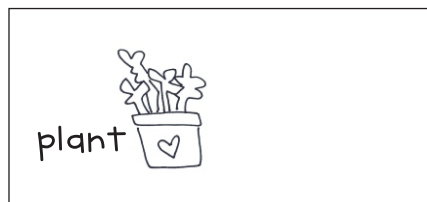

collect recyclable items from
around the house and
turn them into
an artistic creation.

Draw a picture of your masterpiece.

How Many?

Plant Grass!

Did you know that plants are considered a critical resource? They are very supportive of life on our planet Earth. They release oxygen into the atmosphere, absorb carbon dioxide, provide habitat and food for wildlife and humans, and regulate the water cycle. Plant some grass and be a contribution. The best seeds for indoor growing are rye grass seeds.

Write an Earth Day pledge. Cut it out and hang it up.

Earth Day Pledge

Date _____

I will _____

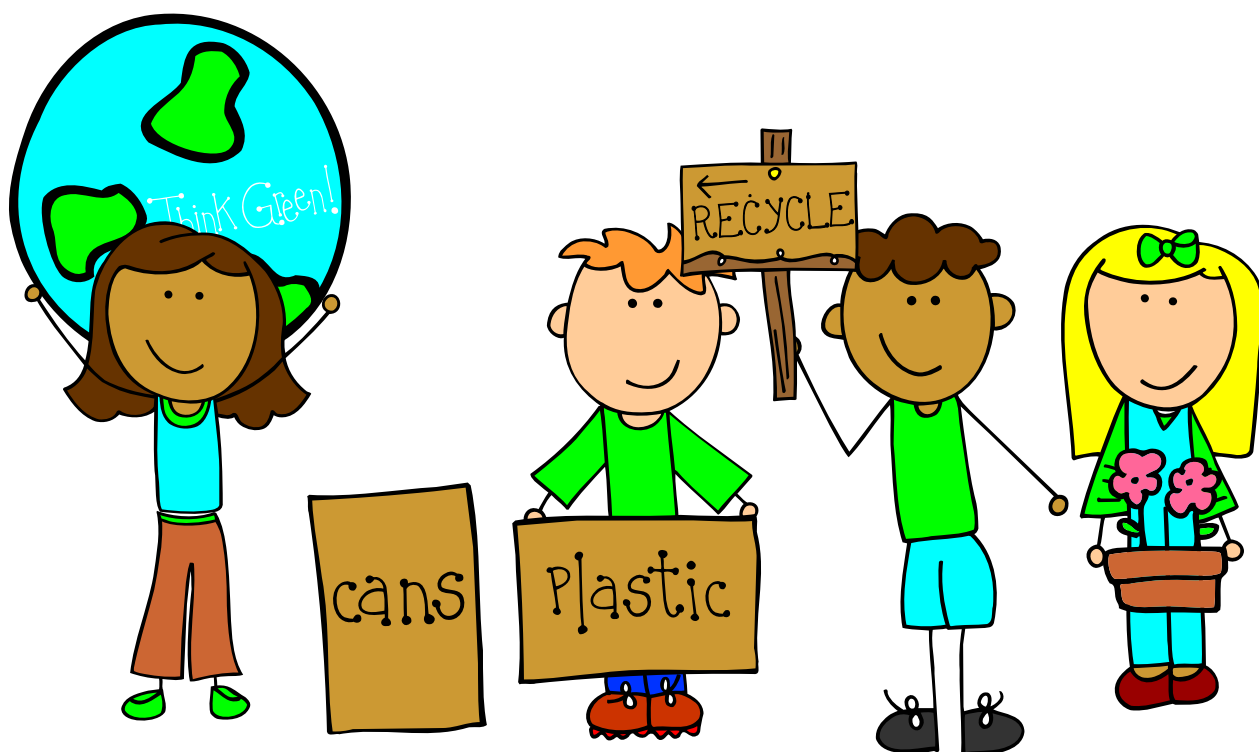

Signed By _____

Dear Parents,

We are learning about how important it is to recycle to take care of our planet Earth. Your child is bringing home a sign to attach to a paper sack. Please collect **CLEANED** items that fit this sign's description and send back on

Thanks,

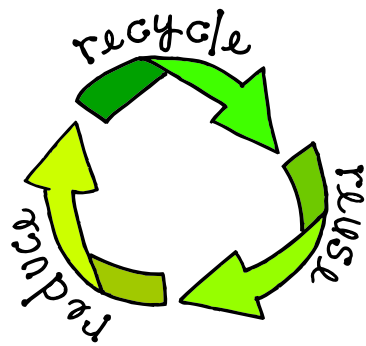

Collecting Recyclables

These four signs can be cut apart and attached to paper sacks from the grocery store to collect a variety of recyclables.

You can do this several ways:

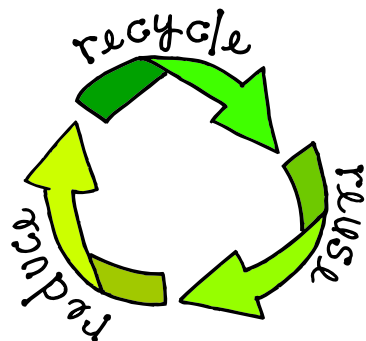

- Clean up your school yard and fill the bags.
- Send each kid with a different sign and have them collect at home.
- Put the bags in the entrance to school and collect from all..

Grass Seed Gifts

These tags are to go with packaged grass seed as an Earth Day gift. Big bags of seed can be broken up and packaged in cute jars or treat bags.

This is for you. It is a seeding mixture for grass that includes mulch, seed & fertilizer.

Put it on a bed or soil and moisten until it turns dark green then watch it grow! If you plant it in a cup and draw a face on the cup, it can be hair!
